- CTI, Integration CRM with PBX
- Interactive voice response (IVR) applications
- Voice broadcast applications
- Automatic answering services
- Other specialized call center automation software

Healthcare

- Electronic health or medical record (EHR or EMR)
- Medical practice management software
- Healthcare management (health system management) software
- Educational medical software
- R&D, pharmacy, red and white biotechnology

Music

- Solutions for media player (web and desktop) functionalities
- Web music applications and plug-ins
- Complex web and desktop music solutions for entertainment
- Professional music editing applications, digital audio editors
- Audio recording applications
- Voice recognition software
- Media storage web portals
- Composing and notation software solutions
- Audio tools for complex projects

We offer two basic business models for the software development services we provide: **Offshore Development Center** services (provided by dedicated team of developers for long-term development projects) for IT companies and **Custom software development** for medium-size and small companies worldwide.

Collaboration models

Offshore development center

- A dedicated team of developers provides long-term development services
- Remote extension of the client's development staff
- Team formation according to client needs, requirements, and standards
- Developers work exclusively on the client's tasks
- Accessible 24/7
- Transparent daily work with tasks reports
- Eight years of experience managing ODCs as well as large and complex custom software development projects
- Consistently fair and reliable approach

This model is ideal for clients who would like to expand on their in-house development staff or outsource all software development.

Custom software application development

- Development of complex software projects
- Full software development cycle from the initial estimation to deployment and further support
- Highly individual and flexible approach - individual solutions for each client
- Expertise in all major technologies
- Regular work status reports
- Advanced quality assurance system

This model is ideal for clients who would like to develop defined software applications / platforms / systems / solutions

“

For our software development services, we use modern technologies and always stay up-to-date with the latest changes and improvements. Our main focus lies in .NET and Flex technologies.

”
